Senior Full Stack Developer

Cleaned Job Description - PDF sample for parser testing

Company	Edgeless, part of HeadFirst Group
Location	Bucharest, Romania
Work Mode	Hybrid, 2-3 days per week from office
Seniority	Senior
Contract Type	Full-time, open-ended contract

About the Role

Edgeless is building a global platform that connects independent professionals, suppliers, and clients across onboarding, matching, contracts, time recording, and invoicing. The company is expanding internationally and focuses on AI-augmented software development.

The role involves working as a Senior Full Stack Developer in an engineering environment where AI tools are deeply integrated into the software development lifecycle. Engineers use AI agents to support implementation, while they validate output, enforce architecture principles, ensure security, and maintain code quality.

How We Work

The company uses Claude Code and Cursor as primary AI-augmented development environments. Features are developed through AI-assisted workflows involving structured documentation, skill containers, and agentic task execution. Engineers define constraints, validate AI-generated output, and enforce quality gates. Code reviews focus on architecture, security, domain correctness, and alignment with engineering principles.

Responsibilities

- Deliver complex features end-to-end across the full stack using AI-augmented workflows.
- Work on .NET backend and Angular frontend development.
- Validate AI-generated output for correctness, architecture, security, and best practices.
- Define clear task boundaries, documentation, and constraints for AI agents.
- Build new capabilities and refactor existing code.
- Improve quality, performance, and maintainability.
- Write clean, testable code.
- Maintain unit and integration test coverage.
- Validate AI-generated tests.
- Collaborate with product and design teams.
- Translate requirements into structured, AI-ready specifications.
- Participate in code reviews and share knowledge with the engineering team.
- Contribute to architectural decisions for scalability and multi-region expansion.

Technology Stack

Area	Technologies
Backend	C#, .NET 9+, ASP.NET Core, Entity Framework Core, RESTful APIs

Area	Technologies
Frontend	Angular 20+, TypeScript
Testing	NUnit, Cypress
Cloud and Infrastructure	Azure App Services, Azure Container Apps, Azure Functions, Azure Cosmos DB, Azure SQL Database, Docker, Docker Compose
CI/CD	Azure DevOps Pipelines, GitHub Actions
AI Development	Claude Code, Cursor, GitHub Copilot or similar AI coding tools

Must Have Skills and Experience

- 7+ years of software development experience.
- Strong expertise in .NET and ASP.NET Core.
- Experience creating scalable web applications, web APIs, and cloud-based services.
- Recent hands-on Angular experience within the last 2-3 years.
- Experience building responsive, component-based frontend applications.
- Strong TypeScript skills.
- Strong experience with Entity Framework Core for data access and database migrations.
- Experience working with relational databases.
- Experience designing and developing RESTful APIs.
- Knowledge of API versioning and Swagger/OpenAPI documentation.
- Knowledge of API security, including OAuth2 and JWT.
- Experience writing and reviewing unit and integration tests.
- Daily use of AI coding tools such as Claude Code, Cursor, GitHub Copilot, or similar.
- Ability to validate AI-generated code.
- Engineering mindset focused on quality and validation.
- Strong analytical and problem-solving skills.
- Ability to adapt to changing requirements and technologies.
- Bachelor's degree in Computer Science, Computer Engineering, or a related field.

Nice to Have Skills and Experience

- Experience with CQRS and Domain-Driven Design.
- Hands-on experience with Azure App Services.
- Hands-on experience with Azure SQL Database.
- Hands-on experience with Azure App Configuration Service.
- Hands-on experience with Docker and Docker Compose.
- Experience with distributed systems.
- Experience with message queuing systems.
- Experience with event-driven architecture.
- Experience structuring prompts, specifications, or documentation to improve AI output quality.

Benefits

- Salary package based on experience.

- 20 paid vacation days.
- Private premium healthcare.
- Flexible working hours.
- Hybrid work model from a central Bucharest office near Piata Muncii.
- Career growth opportunities during international expansion.
- Friendly, relaxed, and creative working environment.

Suggested Skill Labels for the Project

The following labels can help the skill extraction and matching stages classify important competences from this job description.

Must Have	Good to Have
C#, .NET, ASP.NET Core, Angular, TypeScript, Entity Framework Core, RESTful APIs, OAuth2, JWT, Swagger/OpenAPI, Unit testing, Integration testing, Azure, AI coding tools, Claude Code, Cursor, GitHub Copilot	CQRS, Domain-Driven Design, Docker, Docker Compose, Distributed systems, Message queues, Event-driven architecture, Azure App Configuration, Prompt engineering, Technical documentation
